

HeatWork®

industrial heating solutions

NEW! CliWi Green Air & HeatWork Heat Treatment

Heat treatment for extermination of pests

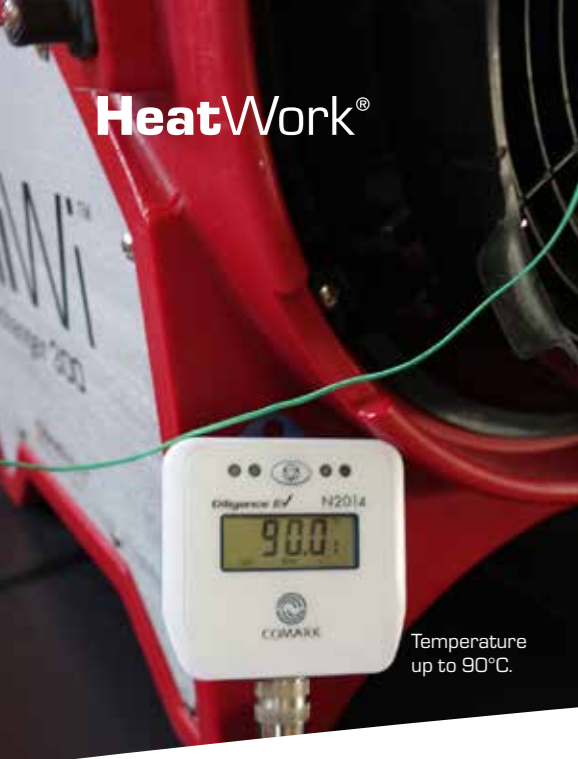

CliWi Green Air
 The most environmentally friendly and cost-effective heating solution on the market!

BEDBUG, MOTH, CHICKEN MITES, COCKROACHES, CTENOLEPISMA FLEAS ...

HeatWork®

Temperature up to 90°C.

NEW! No poison any harmful dust and particles.

Modular: low weight and maximum output

NEW! CliWi Green Air and Heat Treatment

New, effective, health- and environmentally friendly system

For the extermination of pests

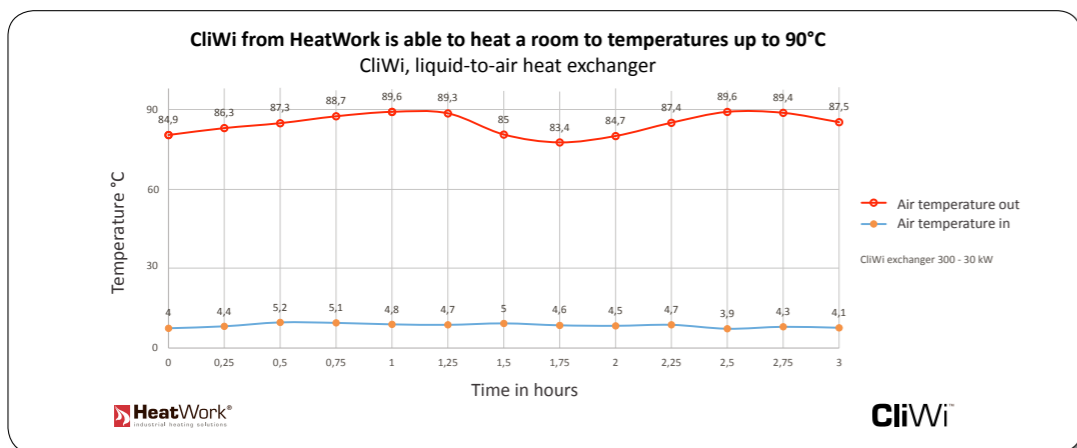

HW Xtreme 103 HT is a specially developed machine for use in heat treatment. The machine is fitted with components and solutions that meet the requirements pests industry sets.

HW Xtreme 103 HT is self-driven and mobile machines operating at 103 kW. Special machine deliver 105°C of hydronic heat with an effectivity of 94%. The machine is also prepared for climate friendly bio-fuel.

Together with the newcomer CliWi exchanger, a unique fluid-borne technology, makes this an innovative system for heat treatment, damage restoration, building heating, drying and so on.

CliWi 200 and 300 • 18 – 30 kW from 1100 – 3400 m³/t air

Achieving high temperature quickly and efficient, with hydronic heat

The method does not burn unhealthy dust and particles

HeatWork and CliWi bedbugs systems are already used in bedbug problems by multiple leading pest-control companies in the North.

CliWi exchange warm fluid to air very effectively

The results are very satisfying and the system is considered as an innovative development to an increasing problem.

CliWi delivers an effective air temperature of approximately 90°C, and is an effective and environmentally-friendly alternative to the use of poison or electrical methods.

This is a completely non-toxic method where heat kills pests from egg to finished adult individual. The method is unique because it saves the environment in a whole new way, both unnecessary emissions from generators and adverse substances found in insect toxic preparations.

Increased flexibility, high efficiency and low energy consumption reduces operating costs considerable. The method does not burn harmful dust and particles, and it provides a better working environment.

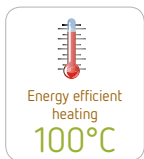

BEDBUG, MOTH, CHICKEN MITES, COCKROACHES, CTENOLEPISMA, FLEAS ...

For more than 10 years HeatWork developed environmental solutions, providing safe and profitable operation! Heatworks mobile hydronic heater is traditionally known to be the market's sovereign thawing and heating option. Now HeatWork also invad the pest territory. Our customers uses our systems because they are concerned with health, safety and environment. HeatWork also supply an an energy-efficient heating.

HeatWork - hydronic heating is environmentally friendly

- ✓ 94% efficiency
- ✓ Environmental and energy efficient system
- ✓ Mobile and self-propelled machinery
- ✓ Closed fluid-borne exchanger system
- ✓ Max 100°C on components and hoses
- ✓ No open flames

CliWi Green Air - clean air and safe work environment

- ✓ An energy-efficient heating, giving clean and uniform heat distribution
- ✓ Quick and effective temperature increase up to 90°C
- ✓ Does not burn harmful dust/particles
- ✓ Gives off no emissions, poison, air, or moisture
- ✓ Safe and pleasant indoor/work climate
- ✓ Bio-energy ready, for the environment
